Aimpoint Digital AI Engineering Assignment

Thank you for taking the time to complete this take home assignment, we do not expect you to spend more than 2 – 2.5 hours as we respect your time and strive for a healthy work-life balance.

0 Pre-reqs

- Sign up for a Databricks Free Edition account using your email address.

1 Objective

Your assignment is to design, build, and explain a novel agentic workflow that utilizes a subset of the Wikipedia dataset. As part of this, you will need to define a distinctive GenAI use case that your system is intended to solve. The aim is to showcase not just your technical implementation skills, but also your ability to apply agentic system design innovatively and practically. You will implement your workflow in the Databricks Free Edition, starting from the provided notebook **01_agentic_wikipedia.ipynb**. Detailed instructions for signing up and setting up Databricks Free Edition are included below.

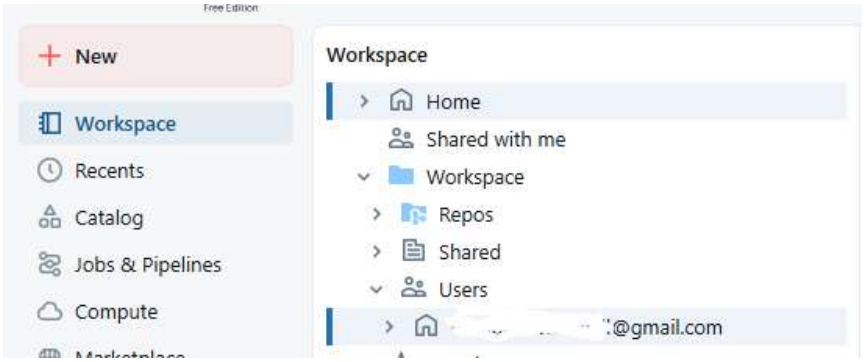

You will find a full description of the assignment requirements in the Jupyter notebook provided. Be sure to read them thoroughly before completing your submission.

2 Deliverables

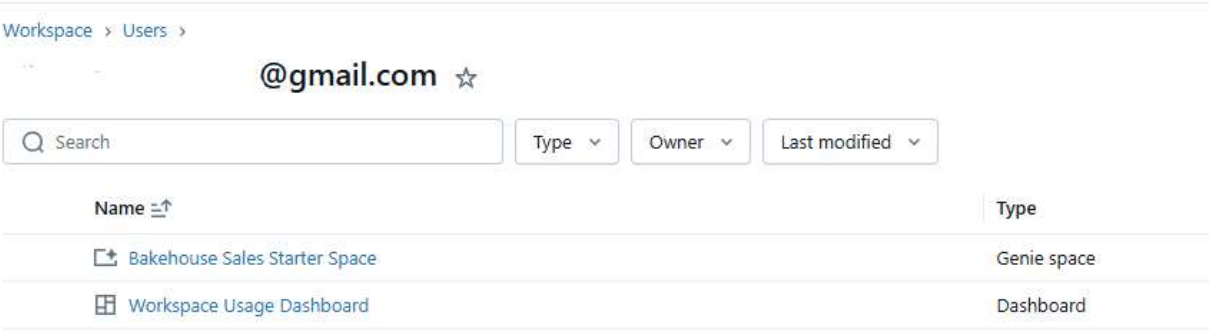

1. Reference Architecture
    a. This should highlight your approach to addressing your use case or problem in either a PDF or image format; include technical agentic workflow details here
2. Databricks Notebook(s)
    a. Must be converted to PDF for submission (naming file in the following format **FIRSTNAME_LASTNAME_AIMPOINT_MLE_ASSIGNMENT.pdf**)
    b. Include primary notebook **01_agentic_wikipedia.ipynb** and any supplemental notebooks required to run the agent

3 Databricks Free Edition Setup

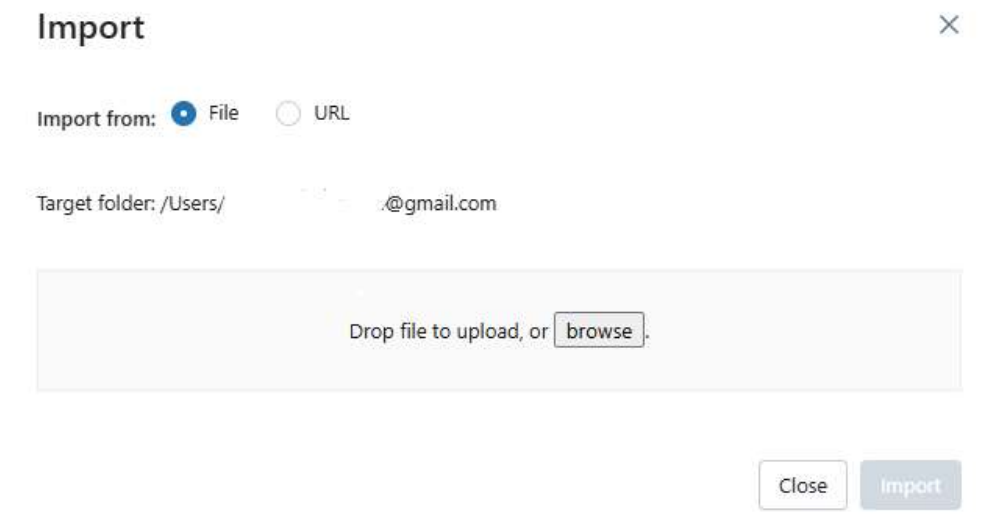

1. Obtain the notebook by clicking on the ShareFile link in the email.
2. Sign up for a Databricks Free Edition account using your personal email address.
3. Login to your Databricks account
4. After logging in, open the "Workspace" from the toolbar, then go to Workspace → Users → [your email].

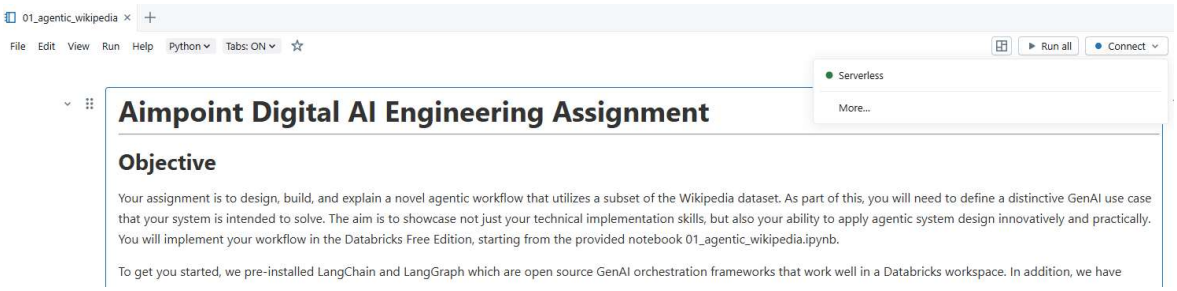

5. You should now see the default Databricks files under your user folder

6. Next, click the three vertical dots (⋮), choose “Import”, ensure “File” is selected, and then click “Browse” to upload the provided Jupyter notebook.

7. Double-click the assignment **“01_agentic_wikipedia.ipynb.”** Then, click the arrow next to “Connect” and select “Serverless.” You will now be connected to a serverless cluster and are ready to begin your assignment.

4 Assignment Submission

Respond to the email where the assignment was shared, and make sure to include the following attachments with your submission:

a. **Reference Architecture:** (PDF or PNG format)
b. **Databricks Notebook:** The "01_agentic_wikipedia.ipynb" notebook, completed in line with the Jupyter notebook instructions. Ensure that both Sections A and B are completed. Save and return the notebook as a PDf file, name your PDF with the following naming convention - FIRSTNAME_LASTNAME_AIMPOINT_MLE_ASSIGNMENT.pdf.
